CBD-Master

The combination of mass coin deposit and bulk note feed makes possible an effective realization of costly service processes. Both business and private customers may pay-in their cash 24 hours with direct transfer to their account by means of online computer network connection. The system is ideal for self-service cash deposit applications for banks, public transport organisations, governmental deposits (taxes, energy etc.) or any other application where maximum reliability and user friendliness is required. Thanks to its compactness and its possible post-integration to given architectural environments the system may be positioned in the lobby or as a through-the-wall solution.

The well known bulk note module from CTS Cashpro and the innovative coin module from NOVOTECH fulfill customers' requirement for maximum performance, counting accuracy and reliability. Especially in the problematic field of the coin deposit where a high reliability is indispensable a technological high-end solution is required. NOVOTECH's technology of the vertical coin conveying warrants reliability for real 24h self-service operation. In comparison to the traditional coin counting technology the vertical conveying bases on a non-chaotic vertical coin conveying against gravity, therefore, an extreme high robustness against foreign bodies can be promised. Through computer network connection the amount deposited can be transferred directly to any account. This connection may be semi-online (DTA) or full-online (WOSA/XFS).

User Interface
